

**ABSTRACT OF THE DISCLOSURE**

5 A balloon holding assembly includes a bottom support and an upper  
support each having a top side and a bottom side. A plurality of elongated  
vertical supports each has an upper end and a lower end. A plurality of  
couplers is attached to each of the upper and bottom supports for  
removably coupling each of the upper ends to a bottom side of the upper  
support and the lower ends to the top side of the bottom support. A cage  
10 is removably positionable over the upper support and extends downwardly  
from the upper support. Helium filled balloons may be positioned in the  
cage such that the horizontal wall prevents the balloons from floating  
upwardly away from the frame.
